

## Help Your Kids March Towards Financial Security – Part 2

By: Principal, Tana Gildea, CFP®, CPA, CCFS

In part 1, we talked about the importance of helping our kids *March Toward Financial Security* by having conversations about saving and how best to allocate a paycheck – or any money that comes their way.

We want to continue that theme by exploring ideas to help them save and invest on their own. An obvious first step is to open accounts like savings and checking accounts. You can walk into your own bank with your teen and open accounts like we did when we were kids (Anybody remember having a “passbook?” I do!). Some banks allow teens to have their own account in their name prior to age 18; others may require a parent to be a joint account holder. Regardless, I recommend setting up balance alerts or some other method of monitoring because there are likely to be a few “oops” moments as your teen is learning the mechanics of banking, and overdraft fees are not cheap (Although they offer a good teaching moment!).

Currently, there are many online options for teens to open an account from the convenience of a cell phone. Do your research and check ratings

and user comments. Sites like NerdWallet and The Balance have ratings for such accounts and a quick online search will lead you to articles and resources to help analyze the options. The important part is to make sure that you help your teenager understand how these accounts work and what tools the bank app has for monitoring and tracking.

There are also companies offering debit cards for kids which have a lot of parental oversight, reporting, and monitoring capabilities. In a time when cash is giving way to electronic commerce, learning how to manage money when it is invisible is more important than ever.

I remember my kids struggled with the difference between an ATM card and a gift card.

They had plenty of experience with the mechanics of gift cards with a set balance “on the card” which was used and then tossed. They had a harder time understanding that the ATM was not a “card with a balance” but rather a “key” to access an account at a bank. A lost card doesn’t mean the loss of the funds “on the card” but rather a temporary inconvenience to the access of the account. These abstract concepts take some detailed explanations.

The more interesting part comes in working through the mechanics of depositing paychecks and setting up automatic transfers to savings and investment accounts. What a gift it is to teens to get them primed to have a formula for receiving money:

- X% to charity (if that’s important to your family),
- Y% to the emergency savings account, and
- Z% to long-term investing.
- Maybe you add a C% for saving for college or a G% for paying for gas each week.

Teaching teens how to allocate their earnings to important goals and priorities sets them up for financial success throughout their lives. They don’t need a job to be introduced to this structure. It is great to set priorities for any money they receive.

This is also an opportunity to teach them about the differences between interest on a savings account and opportunities for dividends and investment growth in an investment account. Savings accounts have low interest rates because the safety of the principal is guaranteed – lower risk, lower reward (interest). Investing carries a risk of loss so must provide greater reward (higher interest rate, dividends, or the opportunity for increases in the value of the investment).

When your teen does have earned income<sup>1</sup> (wages from a job), we recommend they open a **Roth IRA account**. The beauty of a Roth IRA is that the owner can invest those funds, and as long as they follow the Roth rules, they will never be taxed on the returns from those investments (called “unearned” income in tax lingo). Wow – that is a great deal! Interest, dividends, and capital gains over their lifetime build up and are never taxed (under the current tax rules anyway). Unearned “ordinary” income in a non-retirement investment account is subject to tax at “ordinary income” rates which go from 10% to 37%. Gains on investment sales and “qualified dividends” are subject to capital gains rates which are currently 0%, 15%, and 20%.

<sup>1</sup>Earned income tax is a tax-related term and indicates that wages and other such income for contributions to retirement accounts, like IRAs and Roth IRAs, while unearned income, like interest and dividends, is not available for such contributions. Please talk to your tax accountant if you have any questions.

It is important to note that the contribution amount is limited to the lesser of earned income or the limit set in the Tax Code which is \$6,000 for 2022 and \$6,500 for 2023. Other important points:

- The contribution can be made from any source so a parent could incentivize savings by matching the teen's contribution. So, if the teen is going to contribute 20% of their income to the Roth, a parent could match that and gift the teen the money to contribute an additional 20%, thus, doubling the contribution to 40% of income. The limit would be that total contributions and cannot exceed the \$6,000 (2022) and \$6,500 (2023) limits.
- Everyone has until April 15<sup>th</sup> to make the contribution for the PRIOR tax year so you can fund 2022's contribution until April 15, 2023. (They must have earned income for 2022, though, so if they just got a job this year, they would be funding their 2023 contribution.)
- Your teen should report the contribution on his or her tax return for the year of contribution but is not required to. If no return was required to be filed or they have already filed for 2022, they can still make the contribution. They should track their contributions, and the custodian of

the account will send a Form 5498 each year, usually in May, which they should keep for record-keeping purposes.

- There are income limits for making a direct contribution to a Roth so consult with your advisor if you (or your brilliant teen) has a substantial income.

How should they invest those funds? That is a topic for a different day, but this is a great way to get teens interested in and exploring the differences between stocks, bonds, ETF's, and mutual funds. All of the online investing platforms like Schwab, TD Ameritrade, and Fidelity have tools and resources to help people learn about investing and are reputable sources of information. There are many commission-free ETFs that provide broad exposure to U.S. and international markets.

Time is your best friend in terms of investing so starting early and investing consistently will make their march toward financial security that much easier.

As part of our *Financial Foundations* series, we have free webinars which are a great resource for anyone to learn more about the basics of personal finance. Please email [info@homrichberg.com](mailto:info@homrichberg.com) to be added to the invitation list for future webinars.
